Teil A: Verzeichnis der in den Teilen B und C angeführten Gruppen (Gat- tungen, Familien, etc.) ...	9
Teil B: Verbreitungskarten der Arten ...	21
Teil C: Nachtrag zu den Verbreitungs- karten der Arten ...	113
Literaturverzeichnis: ...	115

Einleitung

Diese Arbeit entstand aus dem Wunsch, den im Feld tätigen Botanikern ein Verzeichnis der bisher in der Türkei festgestellten Arten in handlicher Form zur Verfügung zu stellen und zugleich Auskunft über die Verbreitung zu geben. Als Grundlage bot sich das Standardwerk von P.H. DAVIS "Flora of Turkey and the East Aegean Islands", Bände 1-8, an. Diese Verbreitungskarten sind somit ausschließlich als Kurzform des Standardwerkes zu verstehen und auch als solche zu verwenden. Naturgemäß wurden inzwischen bekanntgewordene ergänzende Verbreitungangaben aus den Veröffentlichungen eingearbeitet und neu festgestellte Arten aufgenommen.

Im Familien- und Gattungsverzeichnis (Teil A) sind alle Familien und Gattungen aufgenommen, die im Teil B oder C erfaßt sind. Zur leichteren Auffindung wurde die Band-Nr. bei DAVIS nach der Familienbezeichnung angeführt. Fehlt diese Angabe, so liegt eine bei DAVIS nicht behandelte Gattung vor. Die vor dem Gattungsnamen stehende Zahl weist auf die Seiten- Nr. mit der Verbreitungsangabe hin. Derzeit sind aus 165 Familien mit 1055 Gattungen insgesamt 9228 Arten bzw. Unterarten behandelt.

Bei den Verbreitungskarten (Teil B) sind die nach DAVIS vorgegebenen, bzw. neu beschriebenen, Arten und Unterarten aufgenommen, wobei die angeführten Kreuzungen nur dann übernommen wurden, wenn sie unter einem eigenen Art-namen zitiert sind. Die Gliederung folgt DAVIS, wobei bei den Pteridophyten und bei den Gymnospermae der Spermatophyten auf die Familienbezeichnung verzichtet wurde und somit die Gattungen alphabetisch gereiht sind. Bei den Angiospermae sind für Dicotyledones und Monocotyledones jeweils getrennt die Familiennamen alphabetisch geordnet.

Ebenso sind in allen Fällen die Gattungs- und Artbezeichnungen gereiht. Ist eine Art in Unterarten geteilt, so wird zuerst die Nominatform genannt und die weiteren Unterarten dann nach dem Alphabet angeführt. Inzwischen erschienene Überarbeitungen von Gattungen wurden nicht übernommen, jedoch neu beschriebene Arten meist im Teil C aufgenommen. Bei Gattungen, deren Arten oder Unterarten im Teil C zu ergänzen waren, ist in beiden Teilen jeweils nach dem Gattungsnamen ein * eingetragen. Die Verbreitungsangaben basieren auf dem von DAVIS verwendeten Raster mit 2 Grad Seitenlänge und den Bezeichnungen A,B,C für die Nord-Süd- und 1-10 für die Ost-West-Lage (siehe Abb. 1 und 2, Seite 7 und 8).

Folgende Zeichen wurden verwendet:

-  zitierte Nachweise für die entsprechenden Rasterfelder liegen vor;
-  zitiert nur für die bei DAVIS berücksichtigten Inseln;
-  diese Art ist bisher nur durch den zitierten Beleg bekannt oder ist seit langer Zeit nicht mehr nachgewiesen worden;
-  der Fundort ist nicht eindeutig feststellbar;
-  diese Art ist für die Türkei endemisch;
-  ein Beleg dieser Art befindet sich im Herbarium Dr. SORGER;
-  diese Art kommt in kultivierter Form vor.

Im Nachtrag zu den Verbreitungskarten (Teil C) wurden alle Arten aufgenommen, die versehentlich nicht im Teil B berücksichtigt sind, die erst später zitiert, nachgewiesen oder neu beschrieben wurden und Zitate, die in den Veröffentlichungen mit cf., aff. oder agg. bezeichnet sind.

Das Literaturverzeichnis umfaßt jene Veröffentlichungen, aus denen Zitate in den Teilen B und C berücksichtigt sind.

For

Dr. Friederike Sorger

working with untiring energy for the
scientific progress in the field of
Floristics in Turkey.

Contents:	Page
Introduction:	... 5
Part A: List of families and genera of the species included in parts B and C in alphabetical order	... 9
Part B: Distribution maps of species	... 21
Part C: Supplement to the distribution maps of species	... 113
Bibliography:	... 115

Introduction

This publication originated from the wish to provide for the botanist working in the field in handy form a list of the species found so far in Turkey and also to give information about the distribution. It is based upon the standard publication by P.H. DAVIS "Flora of Turkey and the East Aegean Islands", volumes 1-8. Therefore, my distribution maps are meant to be exclusively an abridged copy of the standard publication and shall be used in this way. Naturally, any additional information of distribution which became known meanwhile, were incorporated and also newly found species were included.

In the list of families and genera (part A) all families and genera are included which are registered in parts B or C. For easy reference the number of the volume by DAVIS was indicated behind the name of the family. If there is no such indication, this signifies a genus not dealt with by DAVIS. The number before the name of genus refers to the page in part B or C where the indication of distribution is listed. At present 9228 species or subspecies from 169 families including 1055 genera are dealt with.

The distribution maps of the species (part B) comprises the species and subspecies mentioned by DAVIS or newly described somewhere; hybrids being included, only, if cited under a separate name of species. For Pteridophytes and the Gymnospermae of the Spermatophytes the name of the family was waived and so the genera are listed in alphabetical order. In the case of Angiospermae the names of the families are listed alphabetically separate for Dicotyledones and Monocotyledones. Furthermore, in all cases the genus and species names are listed alphabetically. If a species is divided into subspecies

first the nominate form is mentioned and the further are listed alphabetically. Revisions of genera meanwhile issued were not included but newly described genera were mostly included in part C. Genera, the species and sub-species of which had to be supplemented in part C, were marked with an asterisk * behind the name of the genus in both parts.

The indications of distribution are based on the grid pattern as used by DAVIS with a side length of 2 degree and the designation A, B, C for north-south and 1-10 for east-west location (see fig.1 and 2 on page 7 and 8).

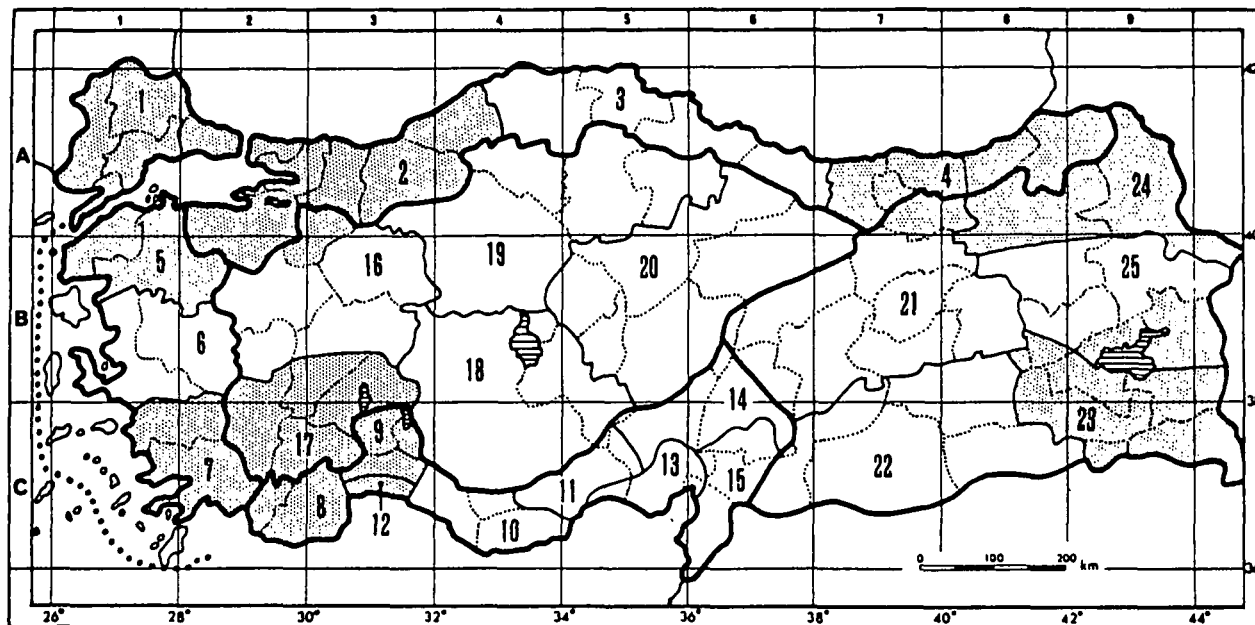

The following symbols were used:

-  cited proof for the relevant grid panel;
-  cited only for the islands considered by DAVIS;
-  this species so far is known only by the cited proof or has not been proven for a long time;
-  the place of discovery cannot be clearly located;
-  the species or subspecies is endemic for Turkey;
-  this plant is proven in the Herbarium of Dr. Sorger, Wien;
-  in Turkey only cultivated.

In the supplement to the distribution maps (part C) were included all species which erroneously were not included in part B, which were cited, proven or newly described only later or any quotation which are marked in the publications by cf., aff. or agg.

The bibliography comprises publications from which quotations were considered in parts B and C.
